

The bridge to possible

Cisco Desk Series

Deep Dive

Charlie Thorpe, Collaboration Technical Marketing Engineer
@Webex_se

BRKCOL-2390

Agenda

- Introduction
- Cisco Desk Pro
- Cisco Desk
- Cisco Desk Mini
- Cisco Desk Cameras
- RoomOS Platform Features
- Vertical Deployment Scenarios

Cisco Webex App

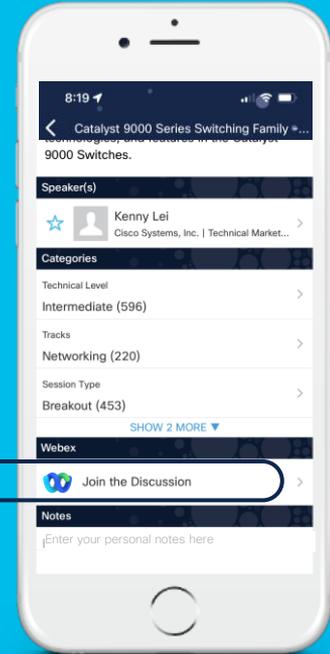

Questions?

Use Cisco Webex App to chat with the speaker after the session

How

- 1 Find this session in the Cisco Live Mobile App
- 2 Click “Join the Discussion”
- 3 Install the Webex App or go directly to the Webex space
- 4 Enter messages/questions in the Webex space

Webex spaces will be moderated until February 24, 2023.

The Cisco Desk family

Desk

Desk Pro

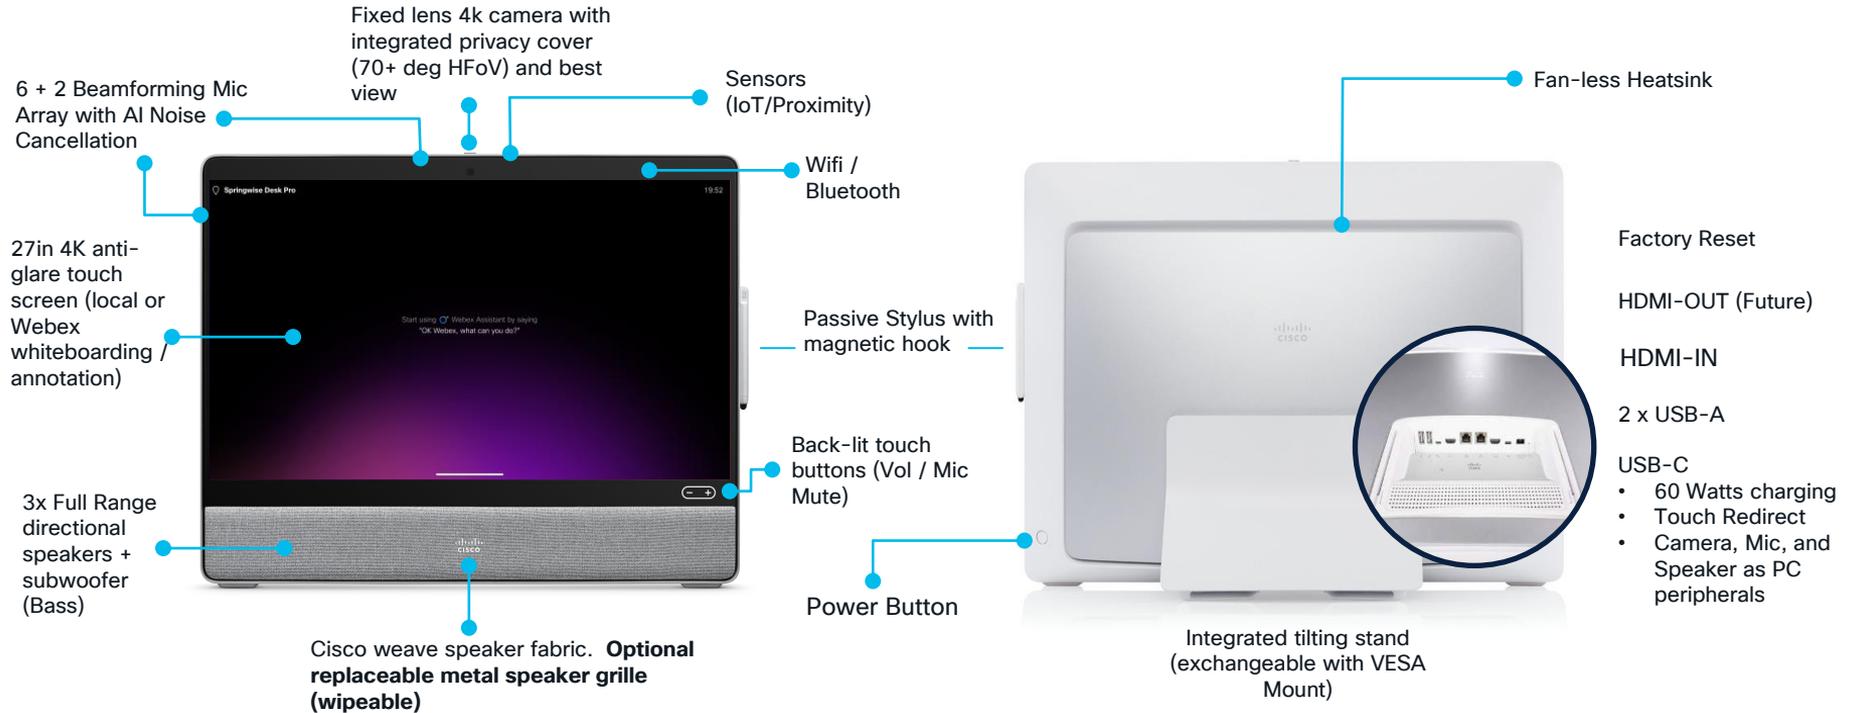

Evolution of the Webex Desk Series

Cisco Desk Pro

Introduction to the Cisco Desk Pro

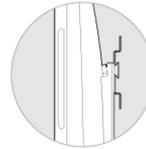

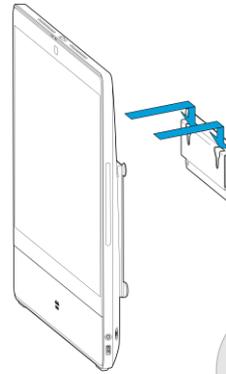

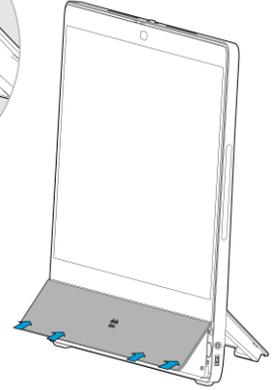

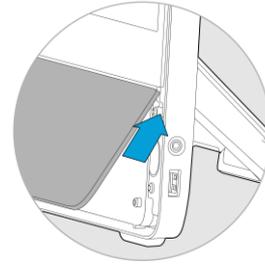

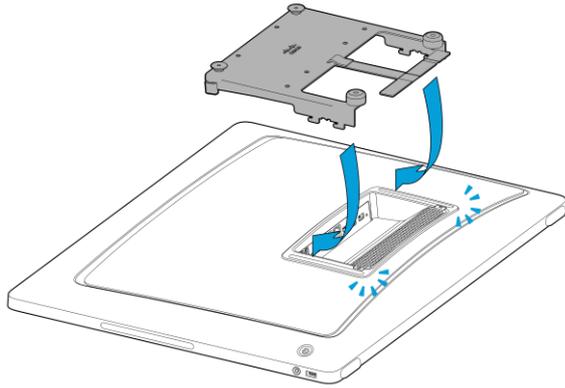

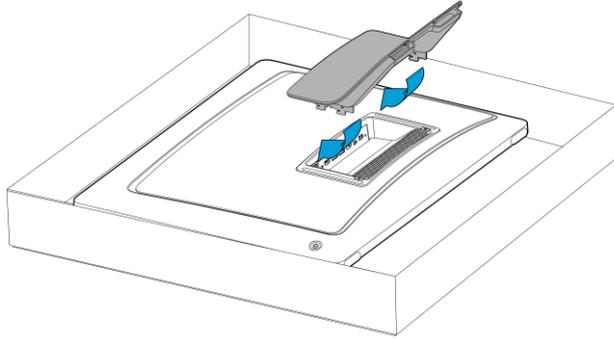

Key Features

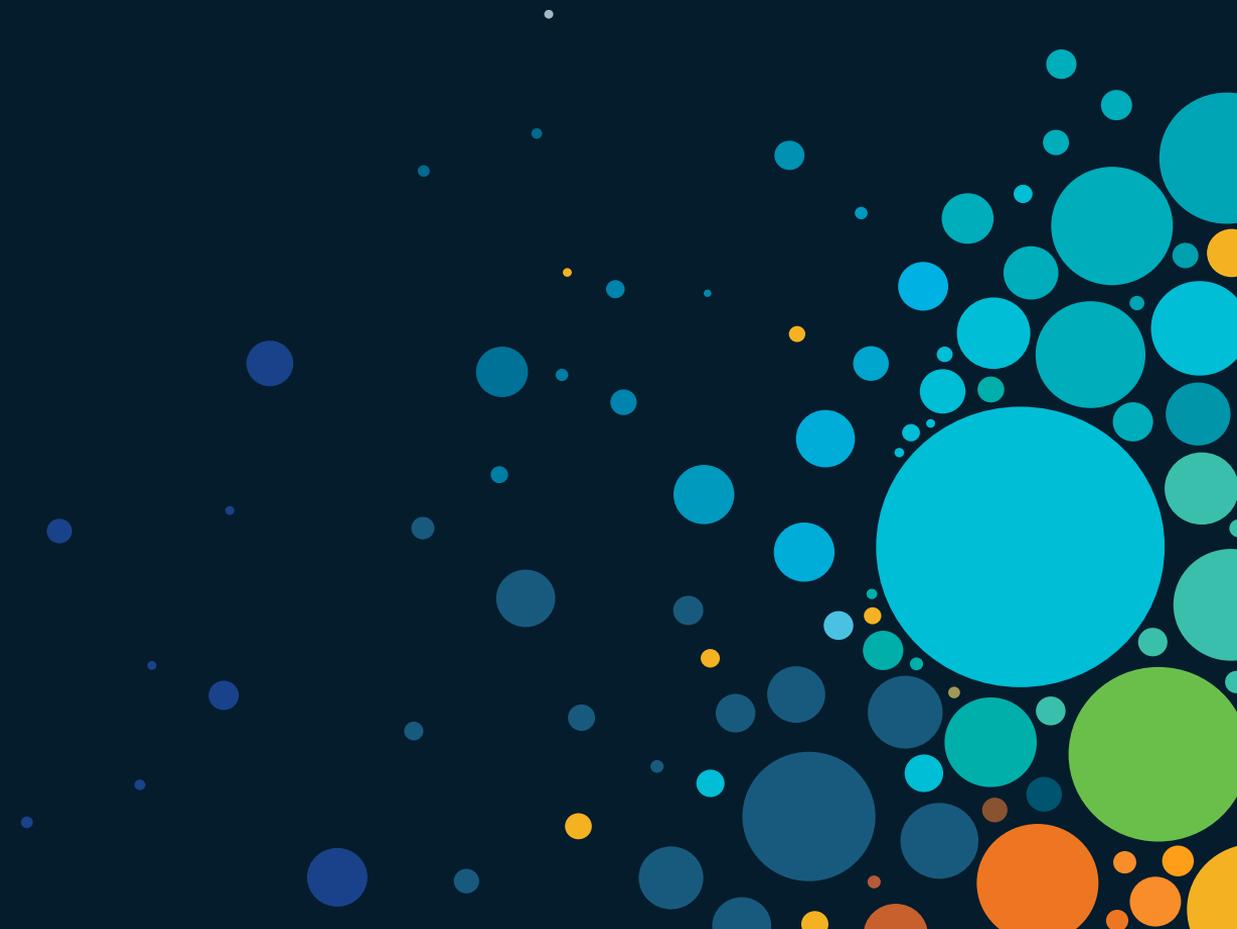

- Calling and Sharing
- Whiteboard
- Webex Meetings
- Noise suppression
- Immersive Share
- Virtual Backgrounds
- Webex Assistant

Easy installation – desk stand, wall mount, grille

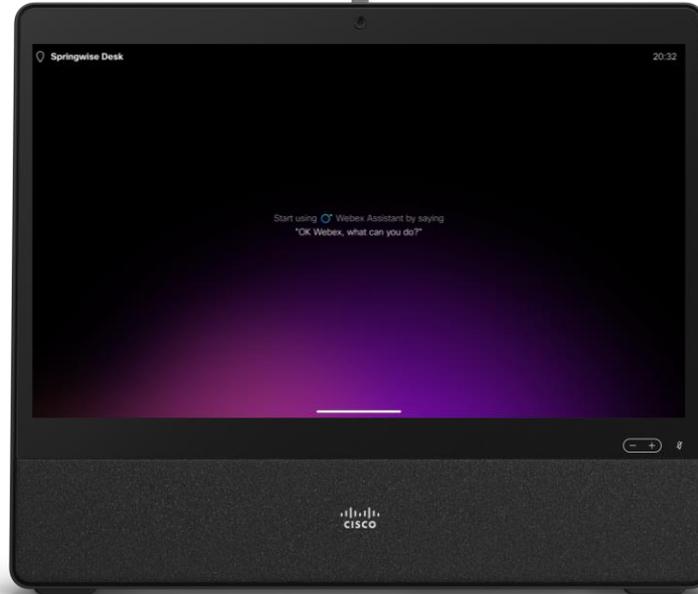

Cisco Desk

Key Features of the Cisco Desk

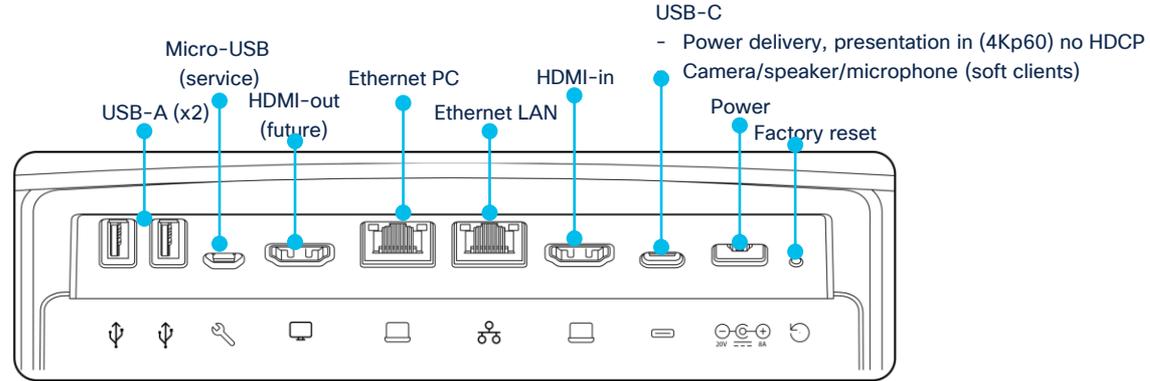

- Calling and Sharing
- Whiteboard
- Webex Meetings
- Noise suppression
- Immersive Share
- Virtual Backgrounds
- Webex Assistant
- Wireless sharing

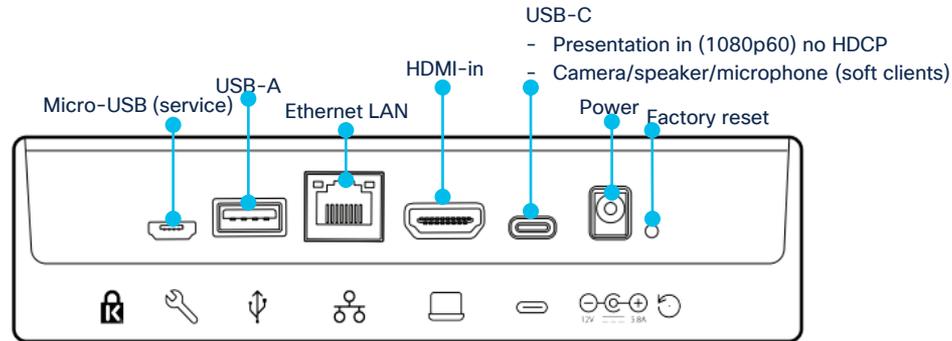

- 24" Screen & 1080p
- One center speaker
- 4 beamforming array
- 64 degrees FOV
- Virtual backgrounds
- USB-C forwarding
- Optional metal grille
- Rear Power Button

Comparison of ports – Cisco Desk Pro vs Desk

Cisco Desk Pro

Cisco Desk

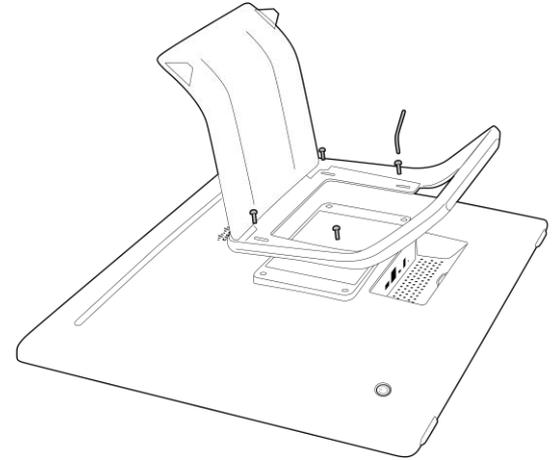

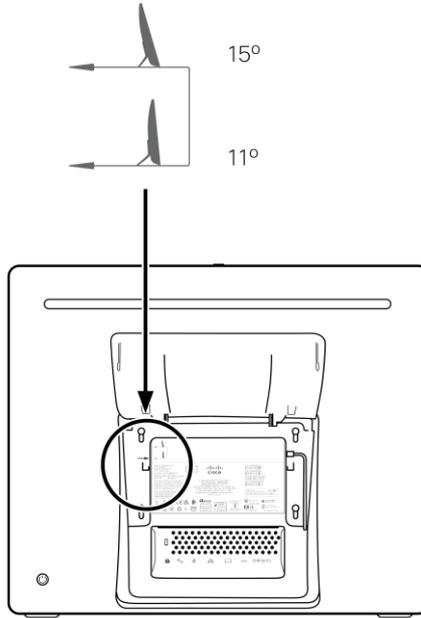

Cisco Desk – Color Options

In addition to our familiar First Light (White), you can choose the dramatically deep Carbon Black. Please note: Limited run of Nordic Blue, Forest Green and Desert Sand have now finished.

Stand for Cisco Desk

- A 15- or 11-degree tilt angle depending upon screw placement
- Screws positioned at the top results in 11-degree tilt
- Screws positioned at the bottom results in 15-degree tilt
- Stand includes L shaped Allen wrench
- Arrow on stand indicates degree of tilt

Wall Mount for Cisco Desk

- The VESA bracket is not needed for Cisco Desk
- 4 bolts are added to the back of unit.
- Top two bolts slide into the wall mount.
- Bottom bolts include rubber feet to allow for the offset that the wall bracket creates.

x4

x2

The Cisco Desk Pro compared with Cisco Desk

	Desk Pro	Desk
Size	27"	24"
Resolution	4k	1080p
Audio	Stereo speakers 3.1 6+2 beamforming mic array, 3.5mm mini jack	One center speaker 4 beamforming mic array
Camera	4K Ultra HD, HFOV 71° Automatic tilt, 2 x digital zoom	8MP HD, HFOV 64° Automatic tilt, 2 x digital zoom
Virtual background support	Yes	Yes
USB-C Capabilities	Screen share; Windows touch forwarding; Camera, Mic, and Speaker as PC peripherals; laptop power (up to 60W)	Screen share; Windows touch forwarding; Camera, Mic, and Speaker as PC peripherals
Changeable speaker grille	Yes (default is fabric)	Yes (default is fabric)

Cisco Desk Mini

Cisco Desk Mini

Hardware at a glance

Portability

- Desk Mini is equipped with an integrated handle for easy transportation.
- All you need is to connect the power cable, switch on and you can work from wherever you like.
- Integrated power supply
- Wi-Fi support for:
 - 802.11a/b/g/n/ac
 - 2.4 GHz/5 GHz
 - 2x2 MIMO

Connectivity

- 1** • USB Type A
 - Max 7.5W max PD
- 2** • Ethernet (10/100/1000)
- 3** • USB Type C
 - Audio and video (1080p60 input)
 - Camera/mic/touch output
 - 7.5W max PD

- 4** • Service (micro USB)
- 5** • Port cover (magnetic)
- 6** • Power connection (underneath Desk Mini)

Cisco Desk Mini – Color Options

In addition to our familiar First Light (White), you can choose the dramatically deep Carbon Black. Please note: Limited run of Nordic Blue, Forest Green and Desert Sand have now finished.

Cisco Desk Cameras

Introducing the Cisco Desk Camera Series

- Cisco Desk Camera 1080p

- Adjust Camera View

Where to find?

The screenshot shows a Webex meeting interface. At the top left is the 'webex by CISCO' logo. At the top right are links for 'Learn More', 'English (EN)', and 'Sign In'. The main area displays a grid of video thumbnails for participants and a shared screen showing a 'Project Roadmap 2021' diagram. Below the meeting view is a collection page titled 'Cisco Devices for admins & users'. It includes '116 Assets', '32 Collections', and a 'Share Collection' link. A 'Sections:' filter bar contains tabs for 'All', 'Instructions', 'Checklists', 'Best practices', 'Quick starts', 'Infographics', 'GIFs', 'Use cases', 'Videos' (which is highlighted), and 'Email templates'. Below the tabs is the text 'Device adoption content to be deployed and delivered to end users'.

- <https://resources.webex.com/webex-essentials/cisco-devices>

Hotdesking

RoomOS Hotdesking Options

USB-C

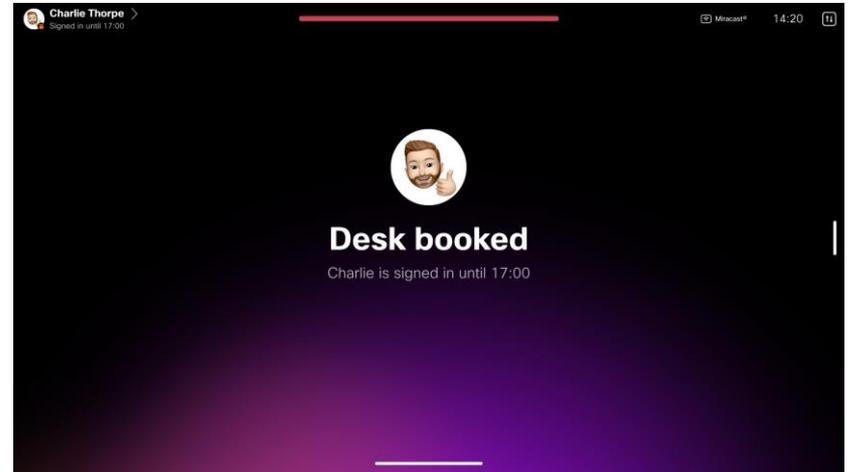

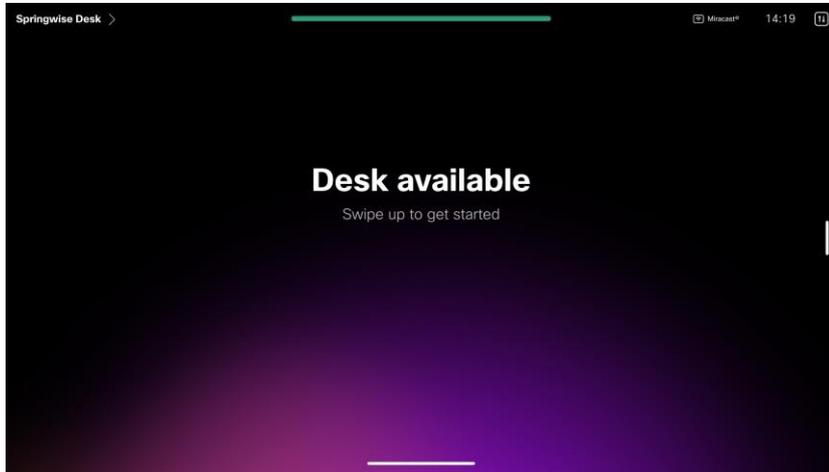

QR

	Desk Pro	Desk	Desk Mini
USB-C + laptop	Yes	Yes	Yes
QR Code	Yes	Yes	Yes
NFC	No	No	No

End User Workflow – Before and After Sign-in

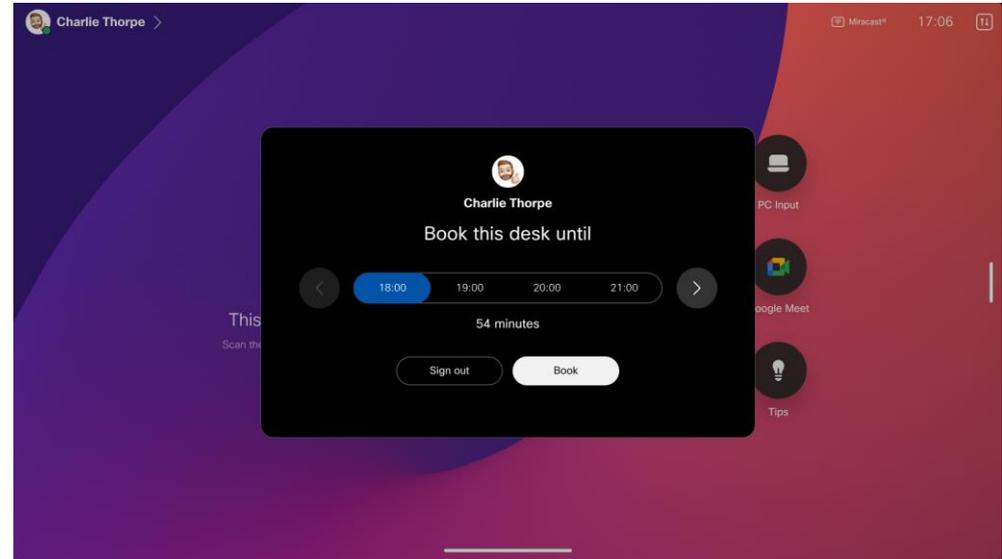

End user signed in

- Logged in device will behave in the same way as a Personal Mode device
- Meeting notifications
- Presence status

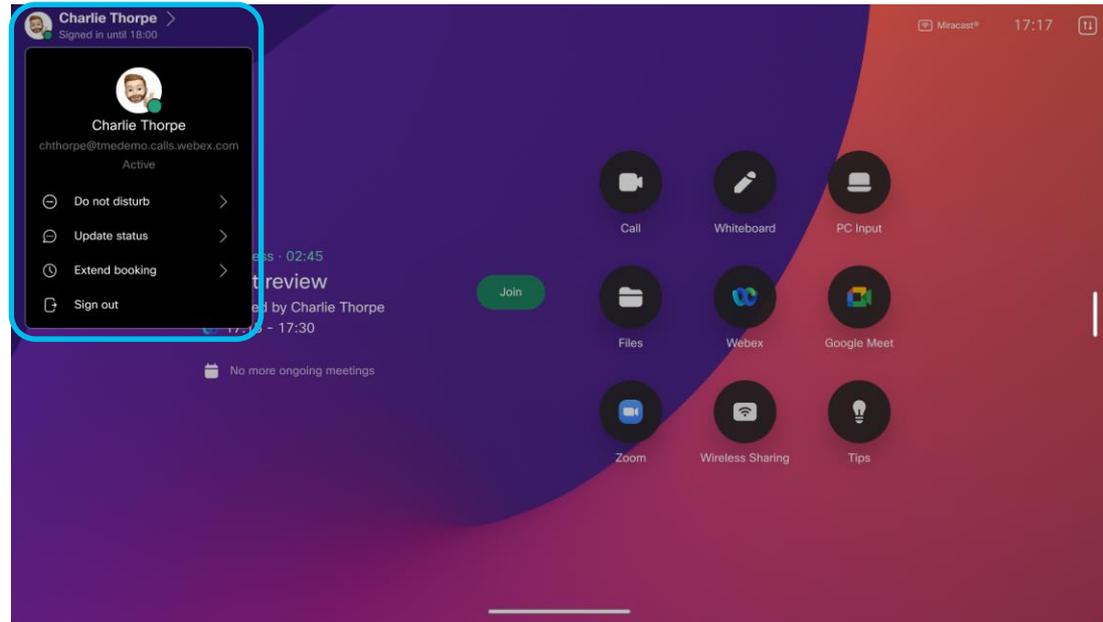

End User Workflow – Book the Desk

- Choose one hour booking slots
- Defaulted to 5 pm local time
- Can book all the way until end of the day - 11:59PM
- Use left arrow to choose an earlier time to end booking
- Use 'Sign out' if you have changed your mind.
- Device will return to ready state if no interaction.
- If AirPlay and Miracast® are configured, they will also be available when the user is logged in

End User Workflow – Sign-out

- You can wait for booking session to expire. Desk device will then automatically sign the user out.
- Manually sign out by clicking name in the upper left corner and then choosing Sign out
- You can also sign out from the Webex app by selecting “Sign out”

Hotdesking Administration

Admin Hotdesking Enablement Overview

Administration of Hot Desking is carried out the Webex Control Hub.

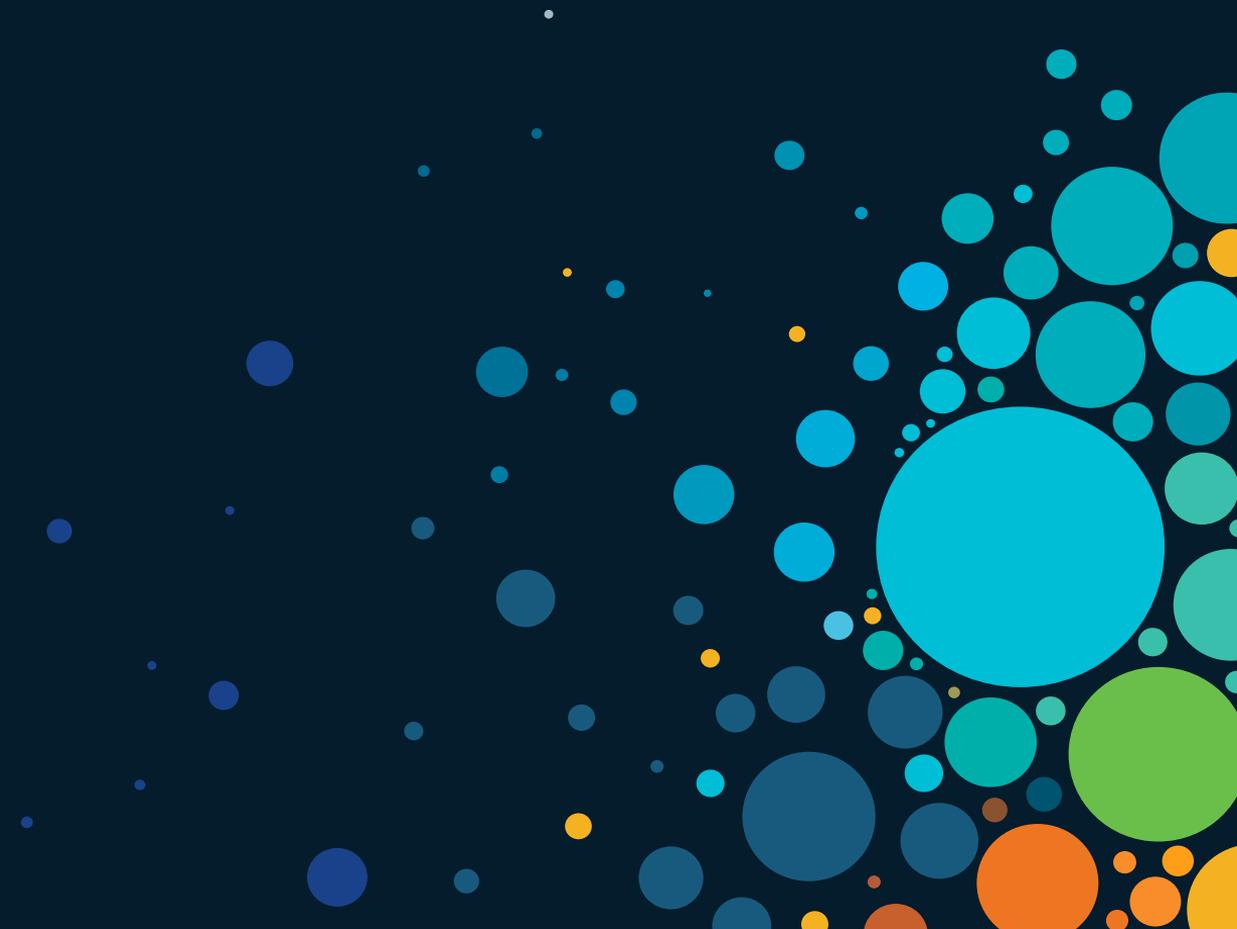

Creating a new Hot Desking Workspace

1. Create a new Workspace in Control Hub configured with Hot Desking
2. Create activation code for Cisco Desk series device
3. Modify Desk Series configuration

Modify an existing Workspace

1. Select existing Workspace to be modified.
2. Modify Scheduling options
3. Modify Desk Series configuration

Creating new Hot Desking workspace

Create new workspace and enable with Hot Desking

1

Add workspace

Workspaces represent a physical space in your organisation. They may contain one device or multiple devices that work together. Workspace details show usage, settings and environmental status for that physical space to help you make decisions to improve the use and cost of your space.

Name *

What do you want to name the Workspace?

Type

What type best describes the Workspace?

Desk

Capacity

How many people is the Workspace suitable for?

Location

Where is the workspace located?

Cisco Live EMEAR 2023

Types of Workspaces
Workspaces come in different shapes and sizes, defining what type of workspace you are adding will help us deliver insights into adoption and usage. In the future, defaults for certain types may exist.

Desk Individual | 1 capacity

5/6

Cancel Next

Control Hub > Add workspace

2

Add workspace

What kind of device do you want to set up in this workspace?

Cisco Collaboration device
e.g. Cisco Navigator, Room, Board and Desk Series device

Cisco IP Phone
e.g. Cisco 8845, 8865, 8800 and Analog Telephone Adapter ports

No device
Creates an empty workspace. Add a room, board or desk series device later.

Back Next

Cisco Collaboration device

3

Add workspace

Which services are needed in this Workspace?

Calling

- Call on Webex (1:1 call, non-PSTN) (default)
This workspace can make and receive calls using SIP or when paired with the Webex app.
- Cisco Webex Calling
Free Calling features with additional PSTN service provided through Webex.
- Hybrid Calling
Free Calling features with additional PSTN service from existing premises, using Unified CM or an HCS partner.

Scheduling

- None
The workspace will be available without the following Room Scheduling services.
- Calendar
Calendar service enables One Button To Push for this Workspace.
- Hot Desking
Enable hot-desking to allow users to sign in and book any shared Webex Desk device with their Webex identity.

Back Next

Scheduling > Hot Desking

Create new workspace and enable with Hot Desking

Once the device activation code has been generated and the Cisco Desk Series device has been activated, your workspace will look similar to the image below.

The screenshot shows the Springwise HD1 workspace configuration page. The page title is "Springwise HD1" with a subtitle "Desk - Capacity: 1 person". There are two tabs: "Overview" and "Scheduling". A blue arrow points to the "Scheduling" tab, which contains the text "Hot desking is enabled for this workspace." Below this, there are two sections: "Real-Time Utilisation Metrics" and "Real-Time Environmental Metrics".

Real-Time Utilisation Metrics

Devices	Idle	Hot Desking	Not active
Occupied	Off	Booked	No
Occupants	Off	Paired apps	0

The device needs to be configured to show all metrics. [How do I enable metrics?](#) [View details](#)

Real-Time Environmental Metrics

Sound Level	Off	Temperature	19/66 °C/F
Ambient Noise	Off	Relative Humidity	44%
		Air quality (TVOC)	Not available

The device needs to be configured to show all metrics. [How do I enable metrics?](#) [View details](#)

Modify existing Workspace

Modify existing Workspace

An existing Workspace can be modified to support Hot Desking:

1. Modify if applicable the Workspace name, type and capacity.
2. Modify scheduling
 - Choose scheduling > Hot desking
 - Cogged wheel > **remove** Hybrid Calendar activation from the Workspace (None > Save) and then enable Hot Desking.

Springwise HD1
Desk - Capacity: 1 person

End result of Hot Desking configuration

- Once Hot Desking has been configured, the Cisco Desk Series device will reconfigure the User Interface to display options for Hot Desk login

Optional but highly recommended configuration changes

- By default, the Desk Series will go into standby and turn off screen.
- Unless standby is disabled, the end users will be unable to see the availability status of the Cisco Desk series device.
- Set Ultrasound to zero to disable it. This avoids wireless pairing in an office that has an open seating area.
- Can be configured from Control Hub (Per Device or in Bulk or set as part of a template). Can also be configured via the Device WebUI.
- Workspace Analytics – configuration of:
 - RoomAnalytics > PeopleCountOutOfCall
 - RoomAnalytics > PeoplePresenceDetector
 - RoomAnalytics > AmbientNoiseEstimation > Mode

Optional but highly recommended configuration changes

Additional considerations for Hot Desking configurations – my favorites!

- QR Code login.
 - Default is On. Can be turned off.
- USBCxAPI login.
 - Default is On. Can be turned off. Allows login via USB-C cable.
- Miracast®
 - Default is off. Configured from Control Hub (only supported if the Cisco Collaboration device is connected to a wired network)
- AirPlay
 - Default is off. Configured from Control Hub.
- UserInterface > Theme
 - Default is set at Auto (light grey screen). Option to set to Night

RoomOS 11 User Experience

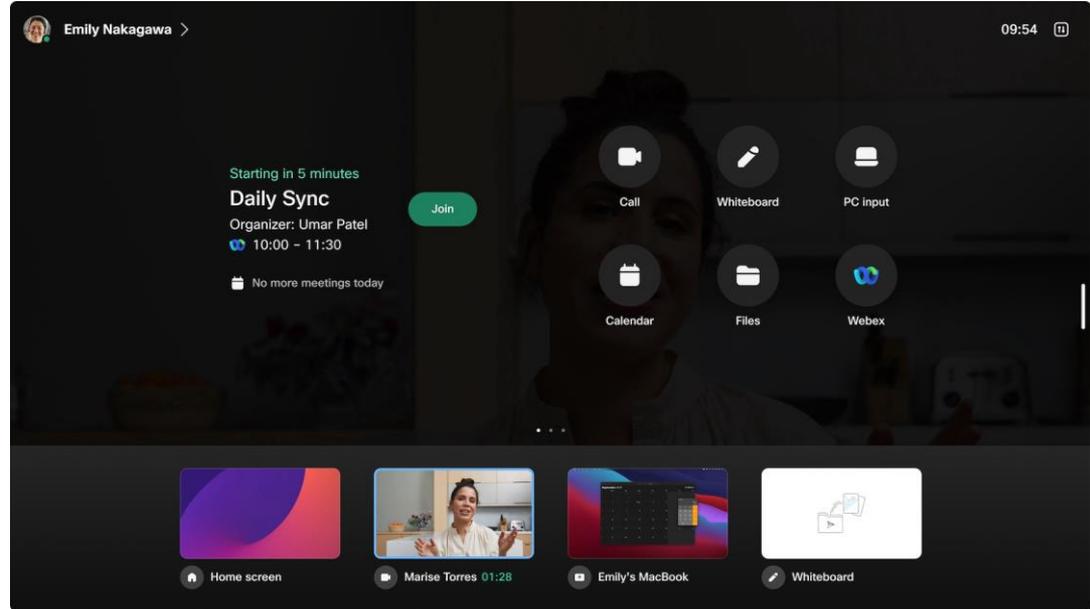

RoomOS 11

- RoomOS November introduced the first release of RoomOS 11 software (Cloud registered or Webex Edge for Devices with Cloud Upgrade Mode enabled)
 - RoomOS 11.0.1.9
- RoomOS on-premises supports the RoomOS 11 User Experience with the latest on-premises release
 - RoomOS 11.1.2.4 (released February 6th 2023)

RoomOS 11 Experience

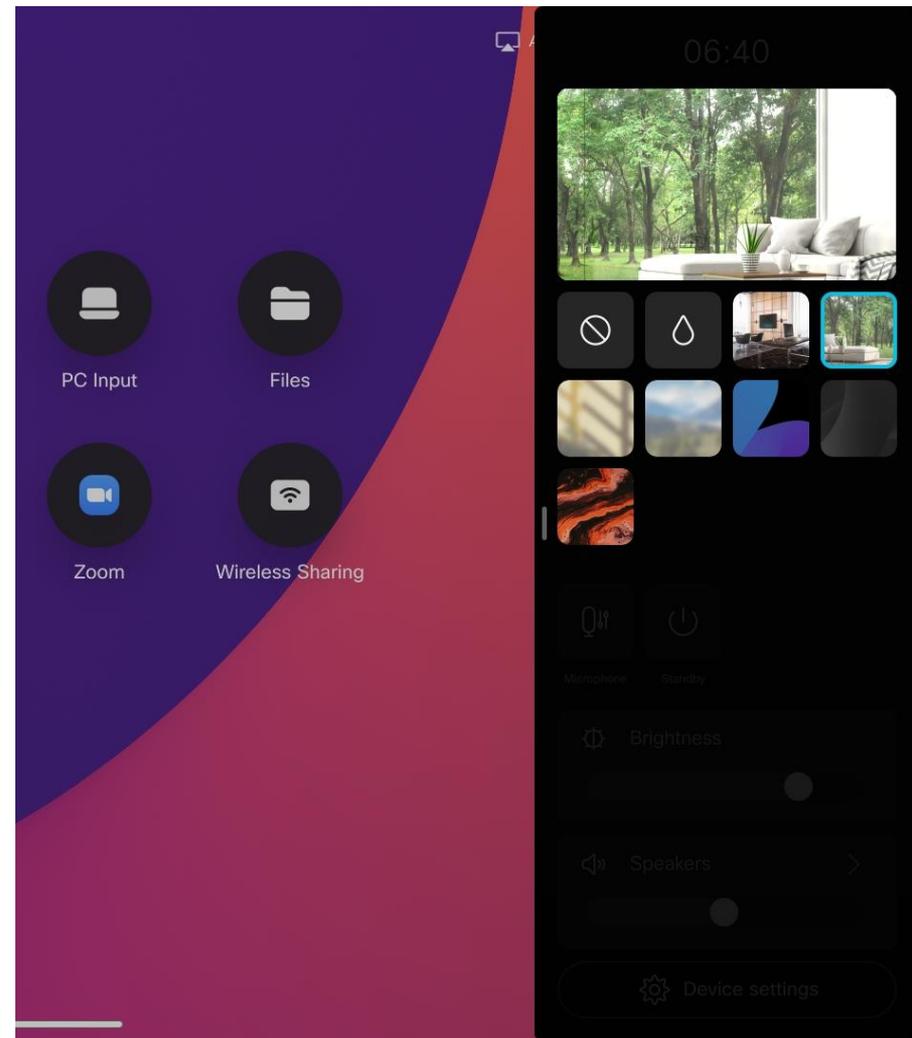

Headlines

- People focus layout options.
- Resize your image on immersive share.
- Expanded reactions set and skin tone support.
- Open Microsoft OneDrive whiteboards on Desk and Board.
- Hotdesking for Desk Series.
- Kiosk Mode.
- Real-time translations in Webex meetings
- Simultaneous interpretation.
- Miracast®
- AirPlay

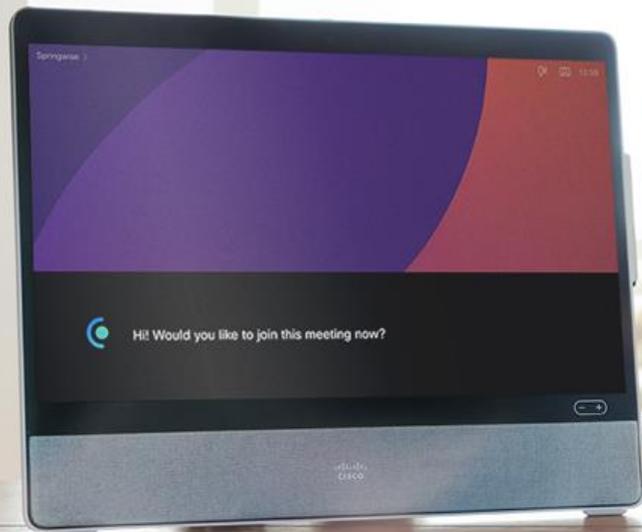

Virtual backgrounds

- Create a virtual office by replacing your background in real time.
- Choose to blur your current background or select from pre-loaded images.
 - Cisco Desk Pro
 - Cisco Desk
 - Cisco Mini
- Personal Mode users can also install their own backgrounds via settings.webex.com

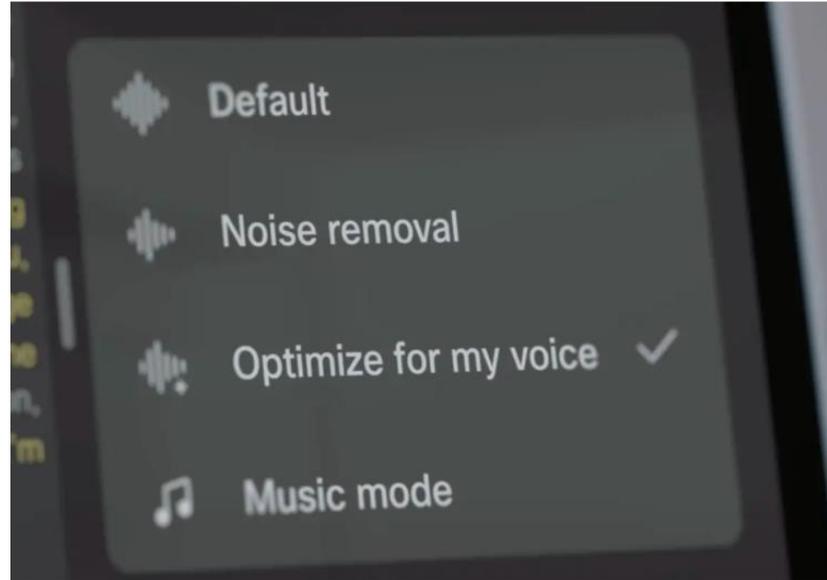

'Yes'

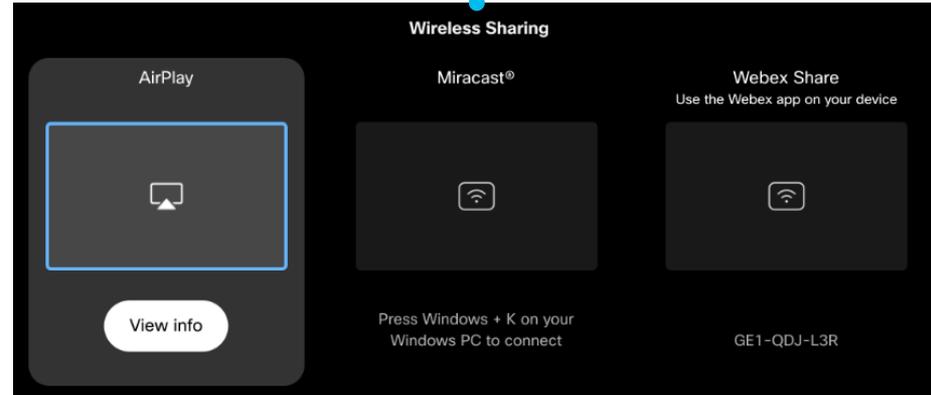

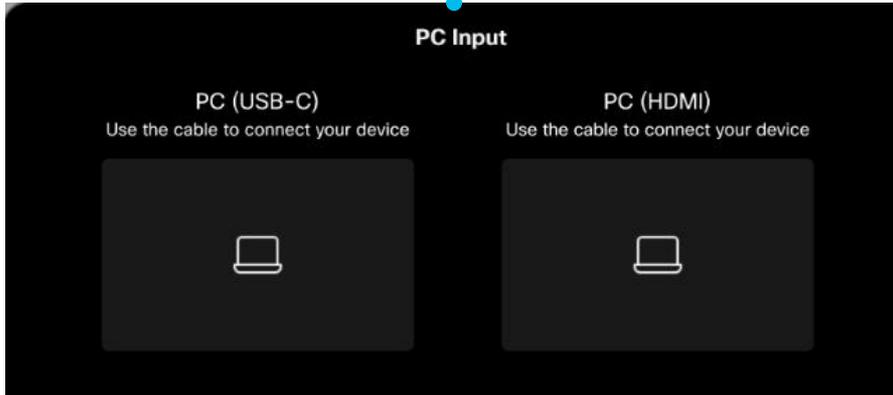

Webex® Assistant

Noise Removal

Cisco Desk Series comes with advanced AI capabilities built in, like noise removal and background replacement to keep you productive no matter your surroundings.

Sharing Support

Miracast® Support

Windows Button + K on a PC

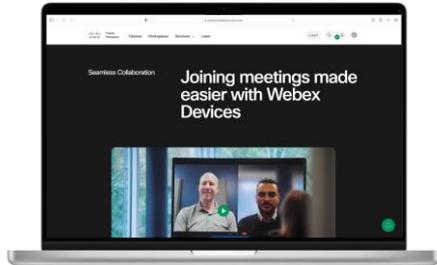

- Miracast® provides a wireless content sharing solution without the need for a client or a connection to the guest/enterprise network as a direct network connection is established from the Windows PC/Android device to the Webex device using Wi-Fi Direct.
- Requires RoomOS 11
- Cisco Collaboration device must be on ethernet connection (not wireless)
- Senders hardware must support Wi-Fi Direct
- Cisco Collaboration devices supports Wi-Fi Direct receiver on 2.4Ghz frequency band
- Share resolution up to 1080p60 with H.264 video
- Admin Controlled
xConfiguration Video Input Miracast Mode: On
- User Controlled
xConfiguration Video Input Miracast Mode: Manual
- There are two versions of the Wi-Fi Display Technical Specification, R1 and R2.
 - Cisco Collaboration devices currently only support R1
 - Webex Desk Hub does not support Miracast
 - Cisco Collaboration devices do not support HDCP over Miracast. Some Android devices require HDCP support.
- Cisco Collaboration devices use TCP port 7236 for Miracast signaling
 - Miracast will not work if this port is blocked
- Devices with built-in Miracast support:
 - Windows 8.1 and above
 - Android 4.2 and above (not supported by Google Pixel)
 - Device must support Wi-Fi Direct

Introduction to AirPlay content sharing

Cisco Collaboration devices

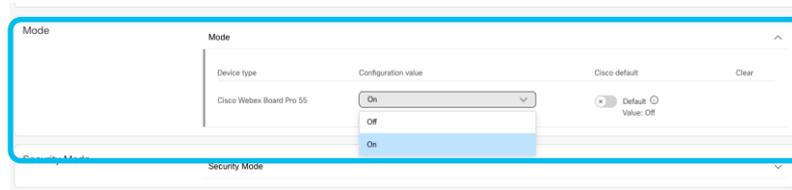

AirPlay allows the sharing of content from an AirPlay device to a Cisco Collaboration device with quality and integrity. AirPlay devices would include:

- iPhone
- iPad
- Mac
- Latest iOS/iPadOS/macOS is always recommended

AirPlay Deployment Options

- Shared Mode systems
 - To enable AirPlay on a Shared Mode system, an Administrator will need to enable the service through Control Hub.
 - Devices > [device name] > All Configurations > Video > Input > AirPlay Mode
 - The Default Value is Off. Switching to On will automatically enable the service on the given Cisco device.
 - Please note to aid device discovery that Bluetooth® should also be enabled. This applies to both Shared and Personal mode systems.

AirPlay Deployment Options

- Personal Mode systems
 - To enable AirPlay on a Personal Mode system, an Administrator will need to enable the service through Control Hub.
 - Devices> [device name]>All Configurations>Video>Input>AirPlay Mode
 - The Default Value is Off. Switching to On will automatically enable the service on the given Cisco device.
 - The end user has the ability from the Cisco Collaboration device settings menu to then further disable and re-enable the service.
 - From the home screen of the Cisco Collaboration device open Device settings>Open AirPlay settings.
 - This option can only be seen once the Administrator has enabled the service through Control Hub.

AirPlay Hardware Support

- AirPlay will be supported on the following devices:
 - Cisco Desk Series
 - Desk Mini, Desk, Desk Pro
 - Cisco Board Series
 - Board S Series, Board Pro Series
 - Cisco Room Series
 - Room, Room Kit
 - Cisco Room Panorama Series is expected to be supported once RoomOS 11 becomes available for the Panorama experience

- AirPlay will not be supported on the following devices:
 - Desk Hub
 - Webex Room Phone, Webex Share, RoomUSB
 - Cisco Board Series
 - Non-S Series devices
 - Cisco DX Series
 - Cisco MX Series
 - Cisco SX Series

Known Limitations

- Playback of DRM protected content is not currently supported. AirPlay requires FairPlay support for DRM content.
 - FairPlay is expected to be supported soon after launch of Apple AirPlay on Cisco devices.
 - FairPlay will be only be supported on the following Cisco devices:
 - Cisco Desk series (excluding Desk Hub)
 - Cisco Board Pro series (no support for Board S series)
 - Cisco Room series (excluding Room Kit Mini, Room Kit, Room Kit Plus, Room 55 Series and Room 70 G1's)
- Streaming of music over AirPlay in the background.
 - Streaming of music over AirPlay will stop if the AirPlay share is not the main focus (i.e. running in the background). This is by design.

Supported Resolutions

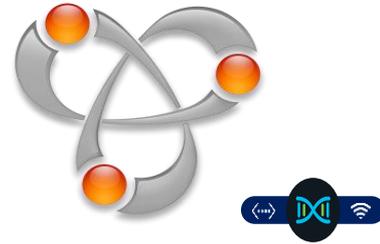

- The following is the maximum supported resolutions when using AirPlay to a Cisco collaboration device:
 - Screen Mirror
 - Up to 1080p60
 - Extended Desktop (Mac only)
 - Up to 1080p60
 - Streaming Video
 - iPhone and iPad – up to 4k30
 - Mac (Safari) – up to 1080p60

Networking Support

- Option 1
 - Simple AirPlay discovery solution with support via Bluetooth® Low Energy Beacon

- Option 2
 - Enterprise-grade AirPlay and more services solution.
 - Scalable Service Routing across any complex networks.
 - Secure Enterprise IT enforced policy control.

The Bluetooth® word mark and logos are registered trademarks owned by Bluetooth SIG, Inc. and any use of such marks by Cisco Systems, Inc. is under license. Other trademarks and trade names are those of their respective owners.

Beacon Support

- How it works: The Beacon is a simple Bluetooth® Low Energy information broadcast that is sent using Apple's vendor specific header. The header contains the IPv4 address of the video device.
- The Apple device will read the header and probe the IP address to confirm it is able to reach the AirPlay capable device.
- The Apple device will pull the name back from the device over the IP network and this is used to populate the picker list on the Apple device.
- The Apple device will list all AirPlay capable devices it can find using any method. For example, Bonjour mDNS, Beacon or AWDL (Apple Wireless Direct Link).
- Please note AWDL is not supported on Cisco devices.
- Important: Cisco devices that are classed as Non-Radio versions also do not support Bluetooth.

Networking Requirements

- The device wishing to share (iPhone/iPad/Mac) and the target Cisco video device must either be on the same broadcast domain (subnet) or the Cisco device will need to be discoverable either through Beacon support or mDNS. IP routing will be required between subnets and network devices to allow the share to establish.
- Please note that Wide Area Bonjour Gateways/Bonjour Forwarding will be needed between subnets if Beacon support is not available.

Always check <https://help.webex.com/en-us/article/n29ja5v/Configure-wireless-sharing-with-AirPlay> for the latest information

Networking Requirements

Port	TCP or UDP	Service or protocol name	Service name	Used by
80	TCP	Hypertext Transfer Protocol (HTTP)	http	AirPlay
443	TCP	Secure Sockets Layer (SSL or HTTPS)	https	AirPlay
319, 320	UDP	Precision Time Protocol (PTP)	ptp	AirPlay
554	TCP/UDP	Real Time Streaming Protocol (RTSP)	rtsp	AirPlay
3689	TCP	Digital Audio Access Protocol (DAAP)	daap	AirPlay
5353	UDP	Multicast DNS (MDNS)	mdns	AirPlay
7000	TCP	AirPlay HTTP server	http	AirPlay
32768-60999	TCP/UDP	Ephemeral port range required between subnets for share	http	AirPlay

Webex Guest Share -> share.webex.com

- Share wirelessly to any Webex registered room device from your browser.
- Guest share works on the latest versions of Firefox and Chrome on Windows, Mac OS, and Linux.
- Closing the browser or the tab where share.webex.com is open stops the share.
- Audio plays through your laptop but not through the display screen. You can't start a share when someone else is sharing.
- Personal Mode not supported.

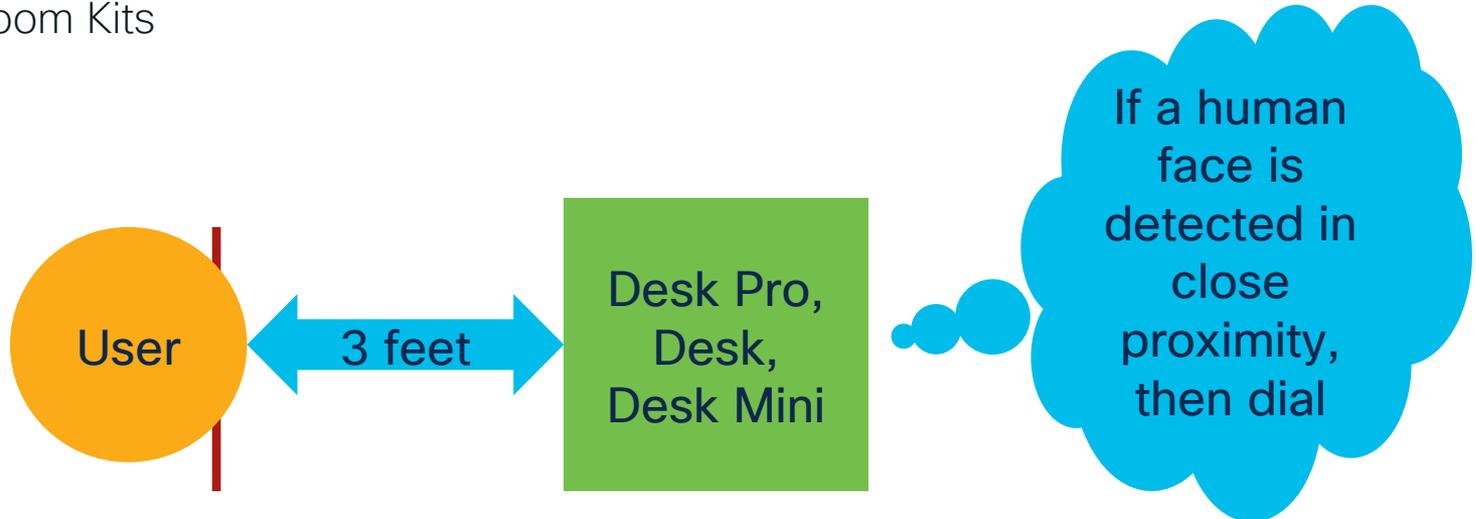

<https://help.webex.com/en-us/article/nrp8zym/Wireless-Guest-Share>

Vertical Deployment Scenarios

Call a Virtual Receptionist using Facial Detection

- Uses near field “Close Proximity” detection to avoid triggering based upon people from a distance (people count)
 - “People count” runs the risk of triggering workflows when people are walking by at a distance
 - More responsive (less delay) than people count
- Close Proximity is available on the Cisco Desk Pro, Desk, Desk Mini, Cisco Board, and Cisco Room Kits

More Vertical Use Programmability Examples

Refer to this Cisco Live 2020 Digital Session BRKCOL-2032

Facial Detection – Minimal Configuration

This is the core logic we will plug this into the Desk Pro Macro Editor

```
xapi.status.on('RoomAnalytics Engagement CloseProximity', (newstate) => {  
  if(newstate === 'True'){  
    xapi.status.get('SystemUnit State NumberOfActiveCalls')  
      .then(callIfNotInCall);  
  });  
});
```

Core Logic

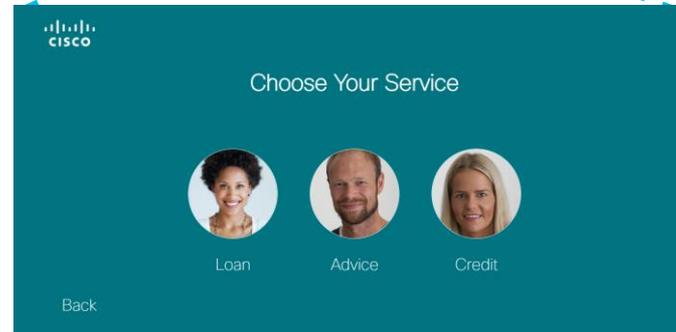

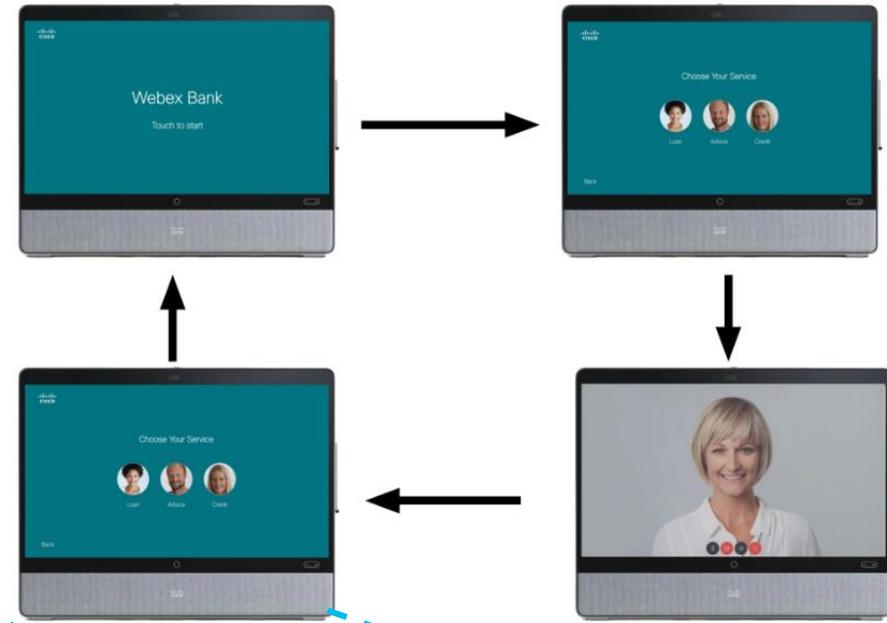

```
function callIfNotInCall(callCount) {  
  if (callCount < 1) {  
    xapi.command('Dial', { Number: '1091' });  
  }  
  xapi.Config.Video.Selfview.Default.Mode.set("On");  
}
```

Secondary Logic

<https://www.ciscolive.com/on-demand/on-demand-library.html?search=BRKCOL-2032#/session/16360602738220017FLJ>

RoomOS Kiosk Mode

- New feature that addresses most Kiosk-type use cases
- Customizable click-to-call interface
- No 3rd party requirements other than a generic web server
- Sample configuration:
<https://cisco-ce.github.io/roomos-samples/kiosk-example/>
- Source code on GitHub:
<https://github.com/cisco-ce/roomos-samples/tree/main/kiosk-example>

Kiosk Mode – How to Configure

1. Enable minimal configuration from the following URL

<https://help.webex.com/en-us/article/ol1th3/Configure-Kiosk-mode-on-Board-and-Desk-Series-devices>

xConfiguration WebEngine Mode: On

xConfiguration UserInterface Kiosk URL: *www.my_web_server.com*

xConfiguration UserInterface Kiosk Mode: On

xConfiguration WebEngine Features SipUrlHandler: On

2. (Optional) Enable lock down and other features such as:

xConfiguration UserInterface SettingsMenu Mode: Locked

xConfiguration UserInterface Security Mode: Strong

3. Customize calling URLs (in main.js):

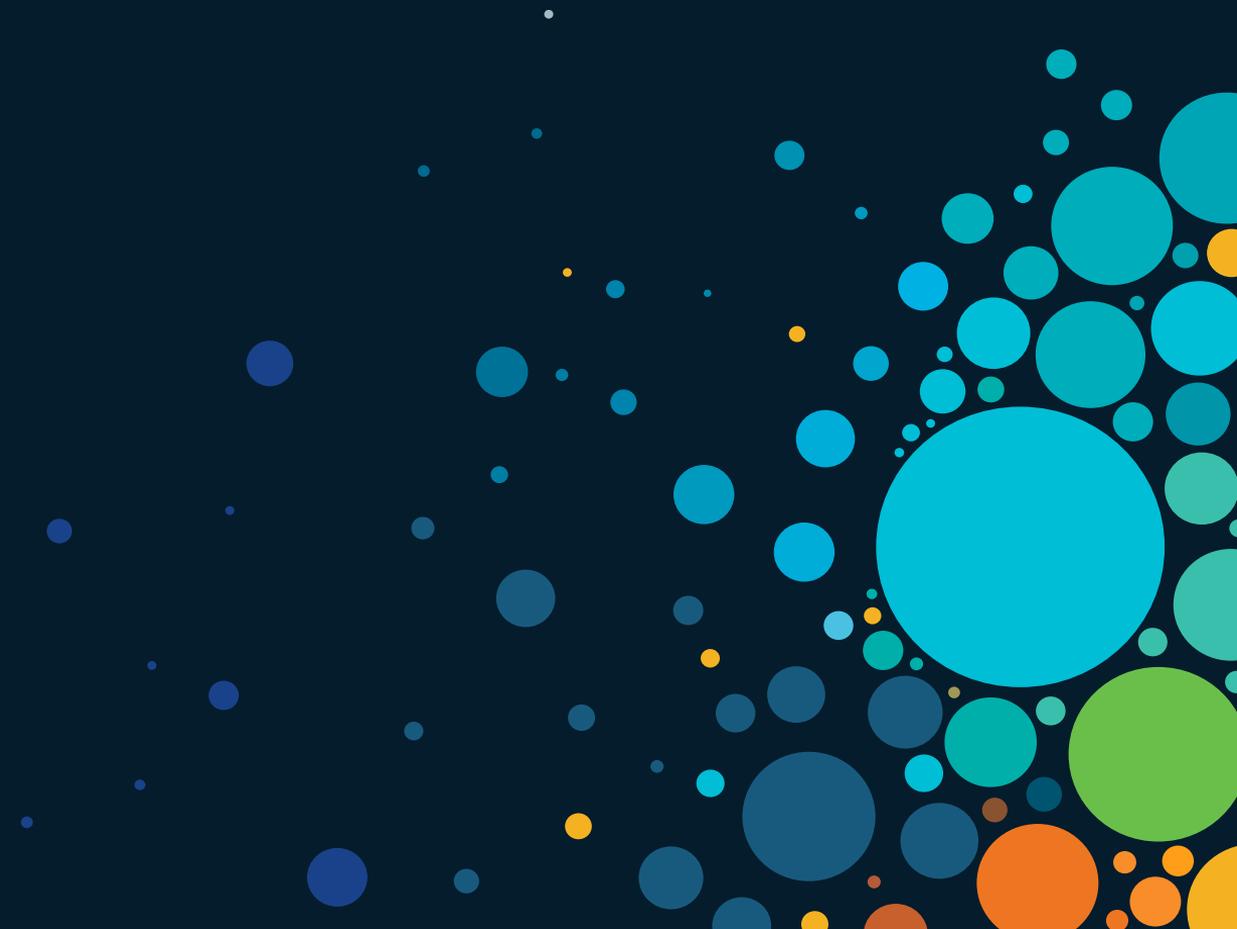

```
services: [  
  { url: 'mymeeting@go.webex.com', name: 'Loan' },  
  { url: 'erica@cisco.com', name: 'Advice' },  
  { url: 'bob@cisco.com', name: 'Credit' },],
```

4. Customize HTML/CSS and add your own photo images

The good
news.....and the
bad!

HDMI Out

HDMI out and Cisco Desk Pro

What can I do?

The feature will allow the HDMI out port on the rear of the Desk Pro (and Board Pro) to drive an additional screen.

This can provide more screen real-estate and increases the flexibility of the Cisco device in the room.

HDMI out on Cisco Desk Pro (and Board Pro)

Mirror meeting to a second screen:
Example – larger screen in an auditorium setup

Extend the meeting across two screens

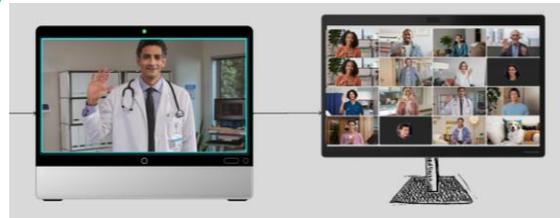

Only use second screen when there is content shared.
Useful for keeping eye contact with the attendees on screen.

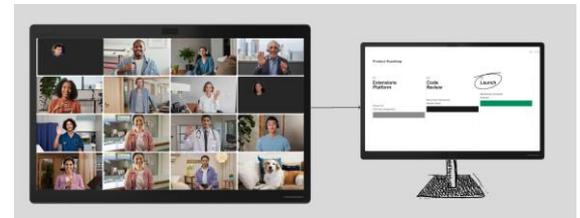

HDMI out on Cisco Desk Pro (and Board Pro)

Mirror meeting to a second screen:
Example – larger screen in an auditorium setup

Extend the meeting across two screens

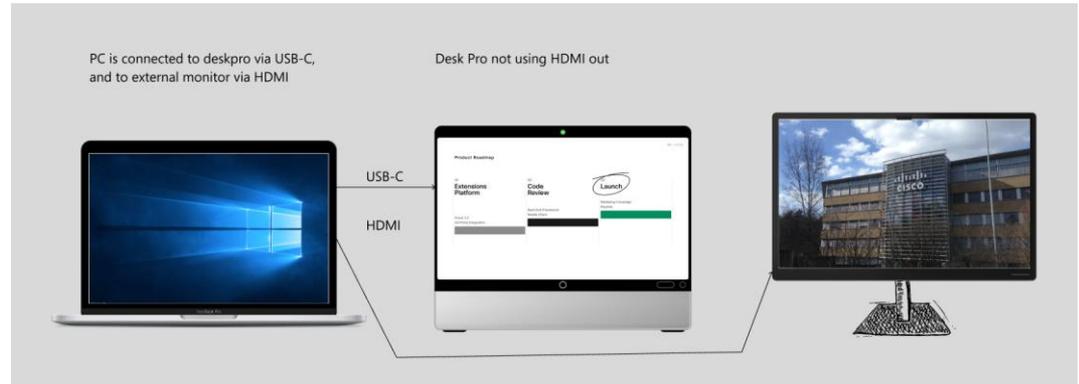

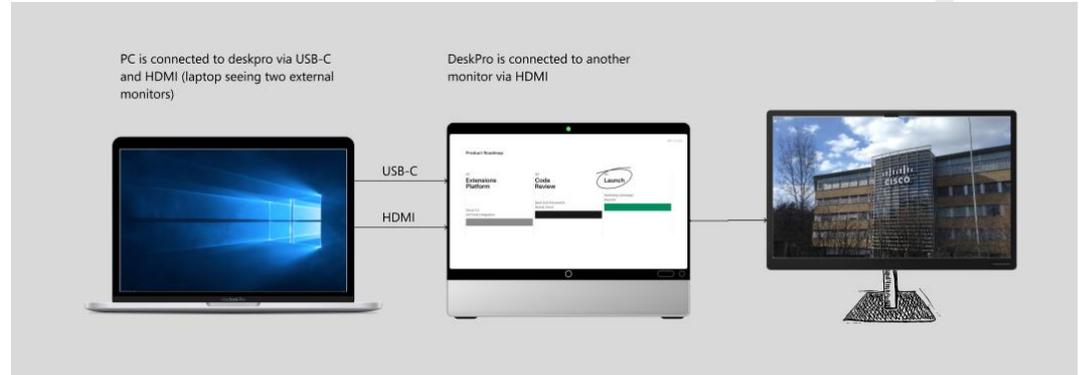

Only use second screen when there is content shared.
Useful for keeping eye contact with the attendees on screen.

What about 'daisy chaining'

'Daisy chaining' via DisplayPort Multi-Stream Transport (MST) is not supported.

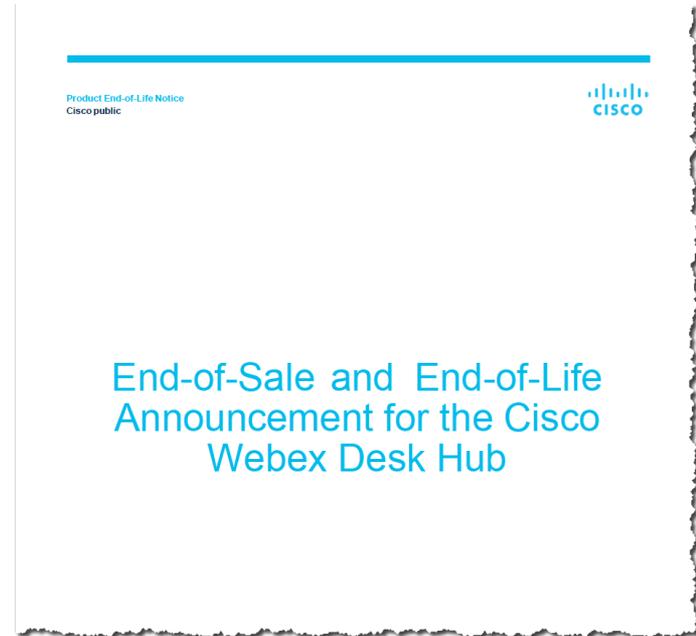

To show different images on the connected screens, you will need two cables.

Desk Hub update

Desk Hub update

- Webex Desk Hub is now End of Sale
 - End of Sale date: December 14th 2022
 - Last date of support: March 31st 2023
