## CCIE Routing \& Switching Hardware Specification

Internetwork Expert's CCIE Routing \& Switching Lab Workbook Volume II uses the same hardware specification that is used in the actual CCIE lab exam. This includes six routers with Ethernet and Serial interfaces. The routers IOS is $12.4 / 12.4$ T and the switches run 12.2. In addition to the six routers, four Catalyst 3550/3560 series switches running the enhanced multilayer software image (EMI) are also included.

As per the actual CCIE lab hardware specification IEWB-RS-VOL2 also includes various external devices that are not within the control of the candidate. These devices include a Frame Relay switch and three backbone routers to inject routes and facilitate in the testing of configurations.

The physical topology of IEWB-RS-VOL2 remains the same throughout the entire workbook. Therefore once your lab has been physically cabled to meet the workbook's specification, there is no need to change the cabling in order to complete each lab.

The specific devices used in design of IEWB-RS-VOL2 were the following

| Device | Platform | DRAM | Flash | Installed <br> WICs / Modules |
